

Wenn dein Plan fertig ist, schick uns ein Foto von deinem Plan (mit allen Hindernissen) auf **educoding@men.lu**.

Challenge Coding Cycle 2

Kevin, home alone

You've probably seen the movie "Home alone".

Kevin's family is away without him and he has to live alone at home. He kind of likes it but then he discovers that there are two robbers at his door. Harry and Marv lie in wait and try to break into his house. But Kevin is a smart guy and wants to protect his house. So he sets up a whole series of traps and obstacles in his house.

For example, he spreads drawing pins on the carpet, greases the railing with black glue or dumps liquid soap over the stairs. Just don't let Harry and Marv get him!

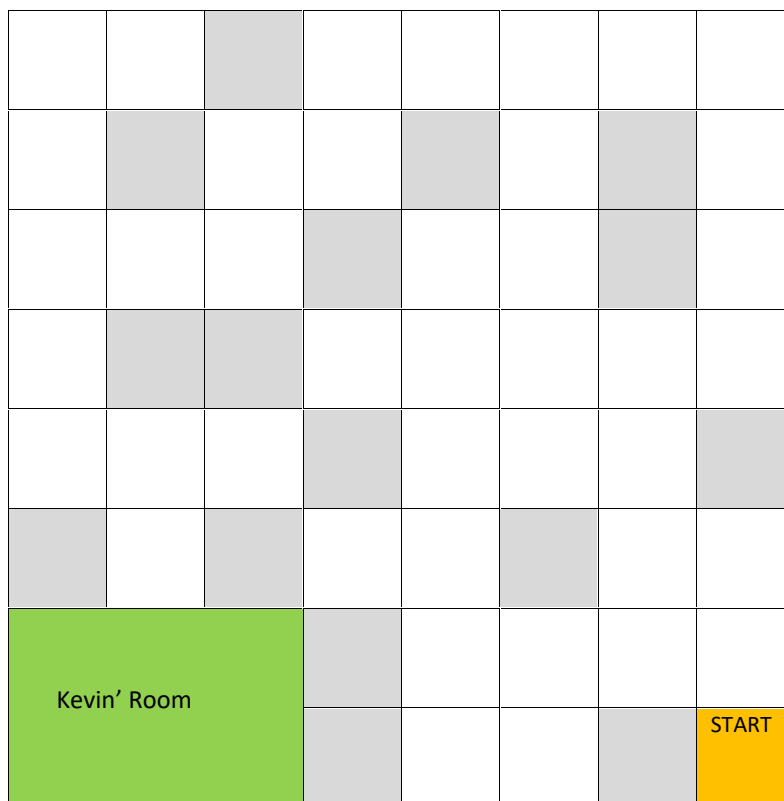

Kevin has just prepared everything, when Harry and Marv manage to break open the cellar door and they come into the house.

Now it has to be quick, because Kevin has to hide. Can you help Kevin to take the shortest way to his room, where he will be safe? Of course without falling into his own traps!

Here you'll find the plan of the house, but you can also draw a larger version of it on a poster.

Your mission:

1. On the plan you can move with the arrows  until you reach Kevin's room.
2. On the grey fields Kevin has set up a trap - you can now paint or make a trap there. Be as creative as Kevin and think up really nasty traps - only then he will have a chance against Marv and Harry.

When your plan is ready, send us a photo of your plan (with all the obstacles) to educoding@men.lu.
